Window Washing Scaffold
Sales and Maintenance Division

Are you protecting your investment?

Exposed

Winterized

This coming winter, help protect your Window Washing scaffold from the harsh effects of winter. When snow accumulates and freezes, water that turns to ice breaks the rubber seals on the motors and control boxes. By the time you want to use your machine the following summer, the machine needs a major repair. Help save on repair costs. Winterize your scaffold.

- Motor, machine components and control boxes stay dry
- Minimize rusting of the brakes
- Saves repair cost , minimal maintenance down time
- Extend the life of your machine

The Window Washing Winter Covers are custom made for each installation. We take careful measurements and make sure the cover protects all critical components of the Window Washing scaffold.

Please call 718 361-2861 and ask for a visit from our Window Washing Scaffold Maintenance team.
